Professional Summary

Environment Artist and Technical Artist with 2 years of professional experience in games and virtual reality. Specialized in stylized medieval fantasy environments in Unreal Engine 5: blockout, level art, props, tileable procedural materials and trim sheets. As a Technical Artist, I build pipeline tools in Python, create VFX with Niagara and optimize assets for VR and mobile. Shipped a mobile game on Google Play working in an Agile team (Scrum, Jira, Git).

Professional Experience

Technical Artist / Developer, Tururut | 07/2025 – 05/2026

- Built 3D environments for virtual reality (VR) in Unreal Engine 5 and Blender, from modeling to lighting and post-processing.
- Optimized VR environments for comfort and performance: clean geometry, LODs, controlled draw calls and no motion-sickness-inducing effects.
- Textured assets with a PBR workflow in Substance Painter and created procedural materials in Substance Designer.
- Developed real-time VFX with Niagara (UE5) and interactive applications in Unity with C#.
- Integrated front-end web development (HTML, CSS, JavaScript) into interactive projects.

Technical Artist / Gameplay & UI Programmer, Player To Player (FreeXPace) | 01/2024 – 02/2025

- Programmed gameplay mechanics, interaction systems and UI animations in Unity with C# for FreeXPace, a mobile game shipped on Google Play.
- Integrated sprites, 3D models and texture atlases in Unity and optimized assets and scripts for Android performance.
- Worked for 14 months in an Agile team with two-week sprints (planning, dailies, retrospectives), Jira task tracking and Git/GitHub version control (branches, pull requests, code reviews).

Personal Projects

Demon's Bell, personal environment in Unreal Engine 5 | In development

- Designed and blocked out a gothic-steampunk dark fantasy city split into 5 connected districts, with functional interiors, player flow and scale references.
- Modeled medieval and industrial props in Blender at human scale.
- Created 9 tileable stone, brick and wood materials sculpted in ZBrush, plus stone and metal mesh trim sheets optimized for UE5.

Simple Exporter, Blender add-on in Python | Open Source (GitHub)

- Developed an add-on with the Blender Python API (bpy) that exports single objects or entire collections to FBX in one click, with automatic prefixes and suffixes to enforce naming conventions.
- Cut asset export from Blender to Unreal Engine from 5-7 manual steps to one.

Skills

- **Engines & Software:** Unreal Engine 5, Unity, Blender, ZBrush, Substance Designer, Substance Painter, Marmoset Toolbag, Krita
- **Environment Art:** environment art, level art, blockout, 3D modeling, props, tileable materials, trim sheets, PBR texturing, real-time lighting
- **Technical Art:** shaders, UE5 Material Editor, procedural materials, Niagara VFX, asset optimization, LODs, draw calls, art pipeline, Blender tools
- **Programming:** Python, C#, Blueprints (UE5), HTML, CSS, JavaScript
- **Workflow:** Git, GitHub, Jira, Agile, Scrum, virtual reality (VR), mobile development (Android)
